## DETAILED ACTION

### *Election/Restrictions*

1. Claims 1-6 generic to a plurality of disclosed patentably distinct species comprising the growth factors, the protein kinase C activators, activators of small and large GTP binding proteins disclosed on page 5 of the specification, the proteasome inhibitors, inhibitors of caspases, agents that upregulate cytoprotective chaperones and agents which upregulate cytoprotecctove cytosolic endoplasmic reticulum and inducers of mild heat shock. Applicant is required under 35 U.S.C. 121 to elect a single disclosed compound for administration in the practice of the claimed method, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
